

STRATEGY BRIEF · 2026

Agile Transformation & AI Strategy

A brief for organizations modernizing delivery operations, value streams, and enterprise agility with AI.

Prepared for transformation and delivery leadership.

Agility and AI are the same conversation now.

Most enterprises have adopted Agile in name — standups, sprints, boards — without realizing its promise. Delivery is still slow, priorities still shift late, and value still gets lost between strategy and shipped software. Layering AI on top of a broken operating model only makes the dysfunction faster.

The organizations pulling ahead treat transformation and AI as one effort: they modernize **how work flows** and **how work gets done** together. PSG helps leaders do exactly that — aligning value streams, delivery operations, and applied AI into a single, measurable operating model.

Value streams

Organize around the flow of value, not org-chart silos.

Delivery ops

Cadence, metrics, and rituals that make outcomes predictable.

Applied AI

AI embedded where it removes real friction — with human judgment in the loop.

Assess, align, accelerate.

We meet organizations where they are and move in deliberate, measurable steps — no framework dogma, no rip-and-replace. Each phase produces reusable capability, so the transformation compounds instead of resetting with every initiative.

01 Assess

AI-assisted discovery maps value streams, delivery bottlenecks, and AI opportunities against business goals — creating a clear, evidence-based baseline.

02 Align

We reshape delivery operations around value streams, define the metrics that matter, and set a pragmatic AI adoption plan with clear guardrails and ownership.

03 Accelerate

Embedded PSG practitioners coach teams, stand up AI-augmented delivery, and prove the model on real work — then transfer the capability to your people.

Adopt AI where it earns its place.

A credible AI strategy isn't about deploying models everywhere — it's about targeting the friction that actually slows value delivery, then adopting AI there with clear ownership, guardrails, and measurable return. We help you prioritize the use cases that matter and avoid the ones that don't.

Throughout, our principle holds: AI amplifies your teams; it does not replace their judgment.

Prioritize friction, not hype.

Measure return, not activity.

AI recommends. Humans decide.

A faster, more predictable enterprise.

The goal isn't agility for its own sake — it's an organization that turns intent into shipped value quickly and reliably, and keeps getting better at it. A PSG engagement leaves you with both the operating model and the in-house capability to sustain it.

Flow, unblocked

Value moves through streams with less handoff, waiting, and rework.

Predictable delivery

Shared metrics make timelines and outcomes forecastable at every level.

Purposeful AI

AI adopted where it pays back — with governance leaders can stand behind.

Self-sustaining teams

Your people own the new way of working after we roll off.

LET'S START

Modernize delivery and AI as one strategy.

We'll run a focused assessment of your value streams and delivery operations, and map a pragmatic path to enterprise agility powered by AI.
